PROFESSIONAL SUMMARY

AI Engineer experienced in building agentic workflows, orchestrating large language models (LLMs), implementing tool/function calling, and integrating retrieval-augmented generation (RAG) with C#/.NET services. Combines enterprise backend development with hands-on multi-agent systems, applied machine learning, and cloud deployment.

PROFESSIONAL EXPERIENCE

AI Engineer | CyberSoft Solutions (Remote) Feb 2025 – Jun 2026

- Designed and developed agentic AI workflows with LLM orchestration, tool/function calling, and multi-step task execution to automate business processes.
- Built C#/.NET backend services and RESTful APIs connecting AI agents to enterprise applications, databases, external tools, and structured knowledge sources.
- Implemented RAG and knowledge-retrieval workflows; applied prompt engineering and context-management strategies for AI-powered applications.
- Collaborated with remote development teams to design, test, and improve integrations; evaluated emerging Generative AI frameworks for practical use cases.

AI Engineering Intern | Systems Limited, Lahore Jul 2026 – Sep 2026

- Contributed to ASP.NET Core API development for an agentic commerce platform, working with controllers, request/response models, JSON serialization, and validation.
- Tested and debugged API request/response flows, tracing issues across service boundaries to support reliable AI-agent and backend integration.

SELECTED PROJECTS

Reply Mirror – Multi-Agent Fraud Detection | Python, LangGraph, Langfuse

- Built a seven-agent fraud detection pipeline covering ingestion, behavior, geo, communications, audio, fusion, and decision; routed LLM calls to higher-risk cases.
- Implemented adaptive risk thresholds and end-to-end Langfuse tracing to monitor individual agent stages and decisions.

MediSense AI – Hybrid RAG Clinical Assistant | Python, LangChain, ChromaDB

- Developed a hybrid RAG pipeline using WHO/NIH guidelines and OCR-extracted patient reports with isolated vector-store collections.
- Placed **5th among 200+ teams** at the HEC Generative AI National Hackathon 2025.

CI/CD Build Failure Predictor | XGBoost, SHAP, FastAPI, Docker, AWS

- Modeled **20,000 Travis CI logs**; achieved **0.77 ROC-AUC** with tuned XGBoost and added SHAP-based model explanations.
- Deployed a containerized FastAPI prediction service to AWS Elastic Beanstalk for pre-build risk assessment.

UFC Fight Predictor | Python, Polars, XGBoost, FastAPI

- Engineered **130 features** from **9,068 bouts** and 18,136 leakage-safe pre-fight snapshots; added **155 automated tests**.

TECHNICAL SKILLS

Programming: Python, C#, SQL, TypeScript, JavaScript, C++

Generative AI: Agentic AI, LLM orchestration, tool/function calling, LangGraph, LangChain, RAG, prompt engineering, ChromaDB, Langfuse, Ollama

Backend & Data: ASP.NET Core, .NET, REST APIs, FastAPI, PostgreSQL, MySQL, MongoDB

ML & DevOps: scikit-learn, XGBoost, SHAP, Docker, AWS Elastic Beanstalk, GitHub Actions

Frontend: Angular 17, React, Next.js

EDUCATION

BS Software Engineering, Information Technology University, Lahore 2023 – 2027 (Expected)

LEADERSHIP

Tech Lead, Code Rush – GDG on Campus, ITU: Organized a competitive programming event for **100+ participants**, including problem design, platform setup, and live troubleshooting.
